

LOADED BOARDS

INTRODUCTION

ETHOS

Skateboarding, snowboarding, and surfing have enriched our lives. Loaded's primary mission is to share that stoke and to do what we can to help them expand and evolve.

INDUSTRY

Our current priority is to grow the longboard community. We view all other longboard companies as friends and partners who are collectively growing skateboarding. We don't have any intention of fighting over market share but rather look to innovate and inspire to grow longboarding for the good of all.

DEALERS

The specialty skate/surf/snow shops and distributors are the heart and soul of board-riding culture. To that end, we work with the best partners worldwide and are committed to supporting these shops and distributors in order to ensure their long-term success.

COMMUNITY

Over the past 15+ years, longboarding has touched many people. The current community is vibrant, diverse, global, and inclusive. We are proud of this and committed to helping it flourish.

THE CARVING BOARD, REIMAGINED.

THE ICARUS

Loaded pioneered the flexible drop-through board with the Dervish in 2007 and the Tan Tien in 2010. We've returned to our carving roots using many of the things learned over the past few years from our freeride boards, downhill boards, and our snowboard (with design cues from bacon).

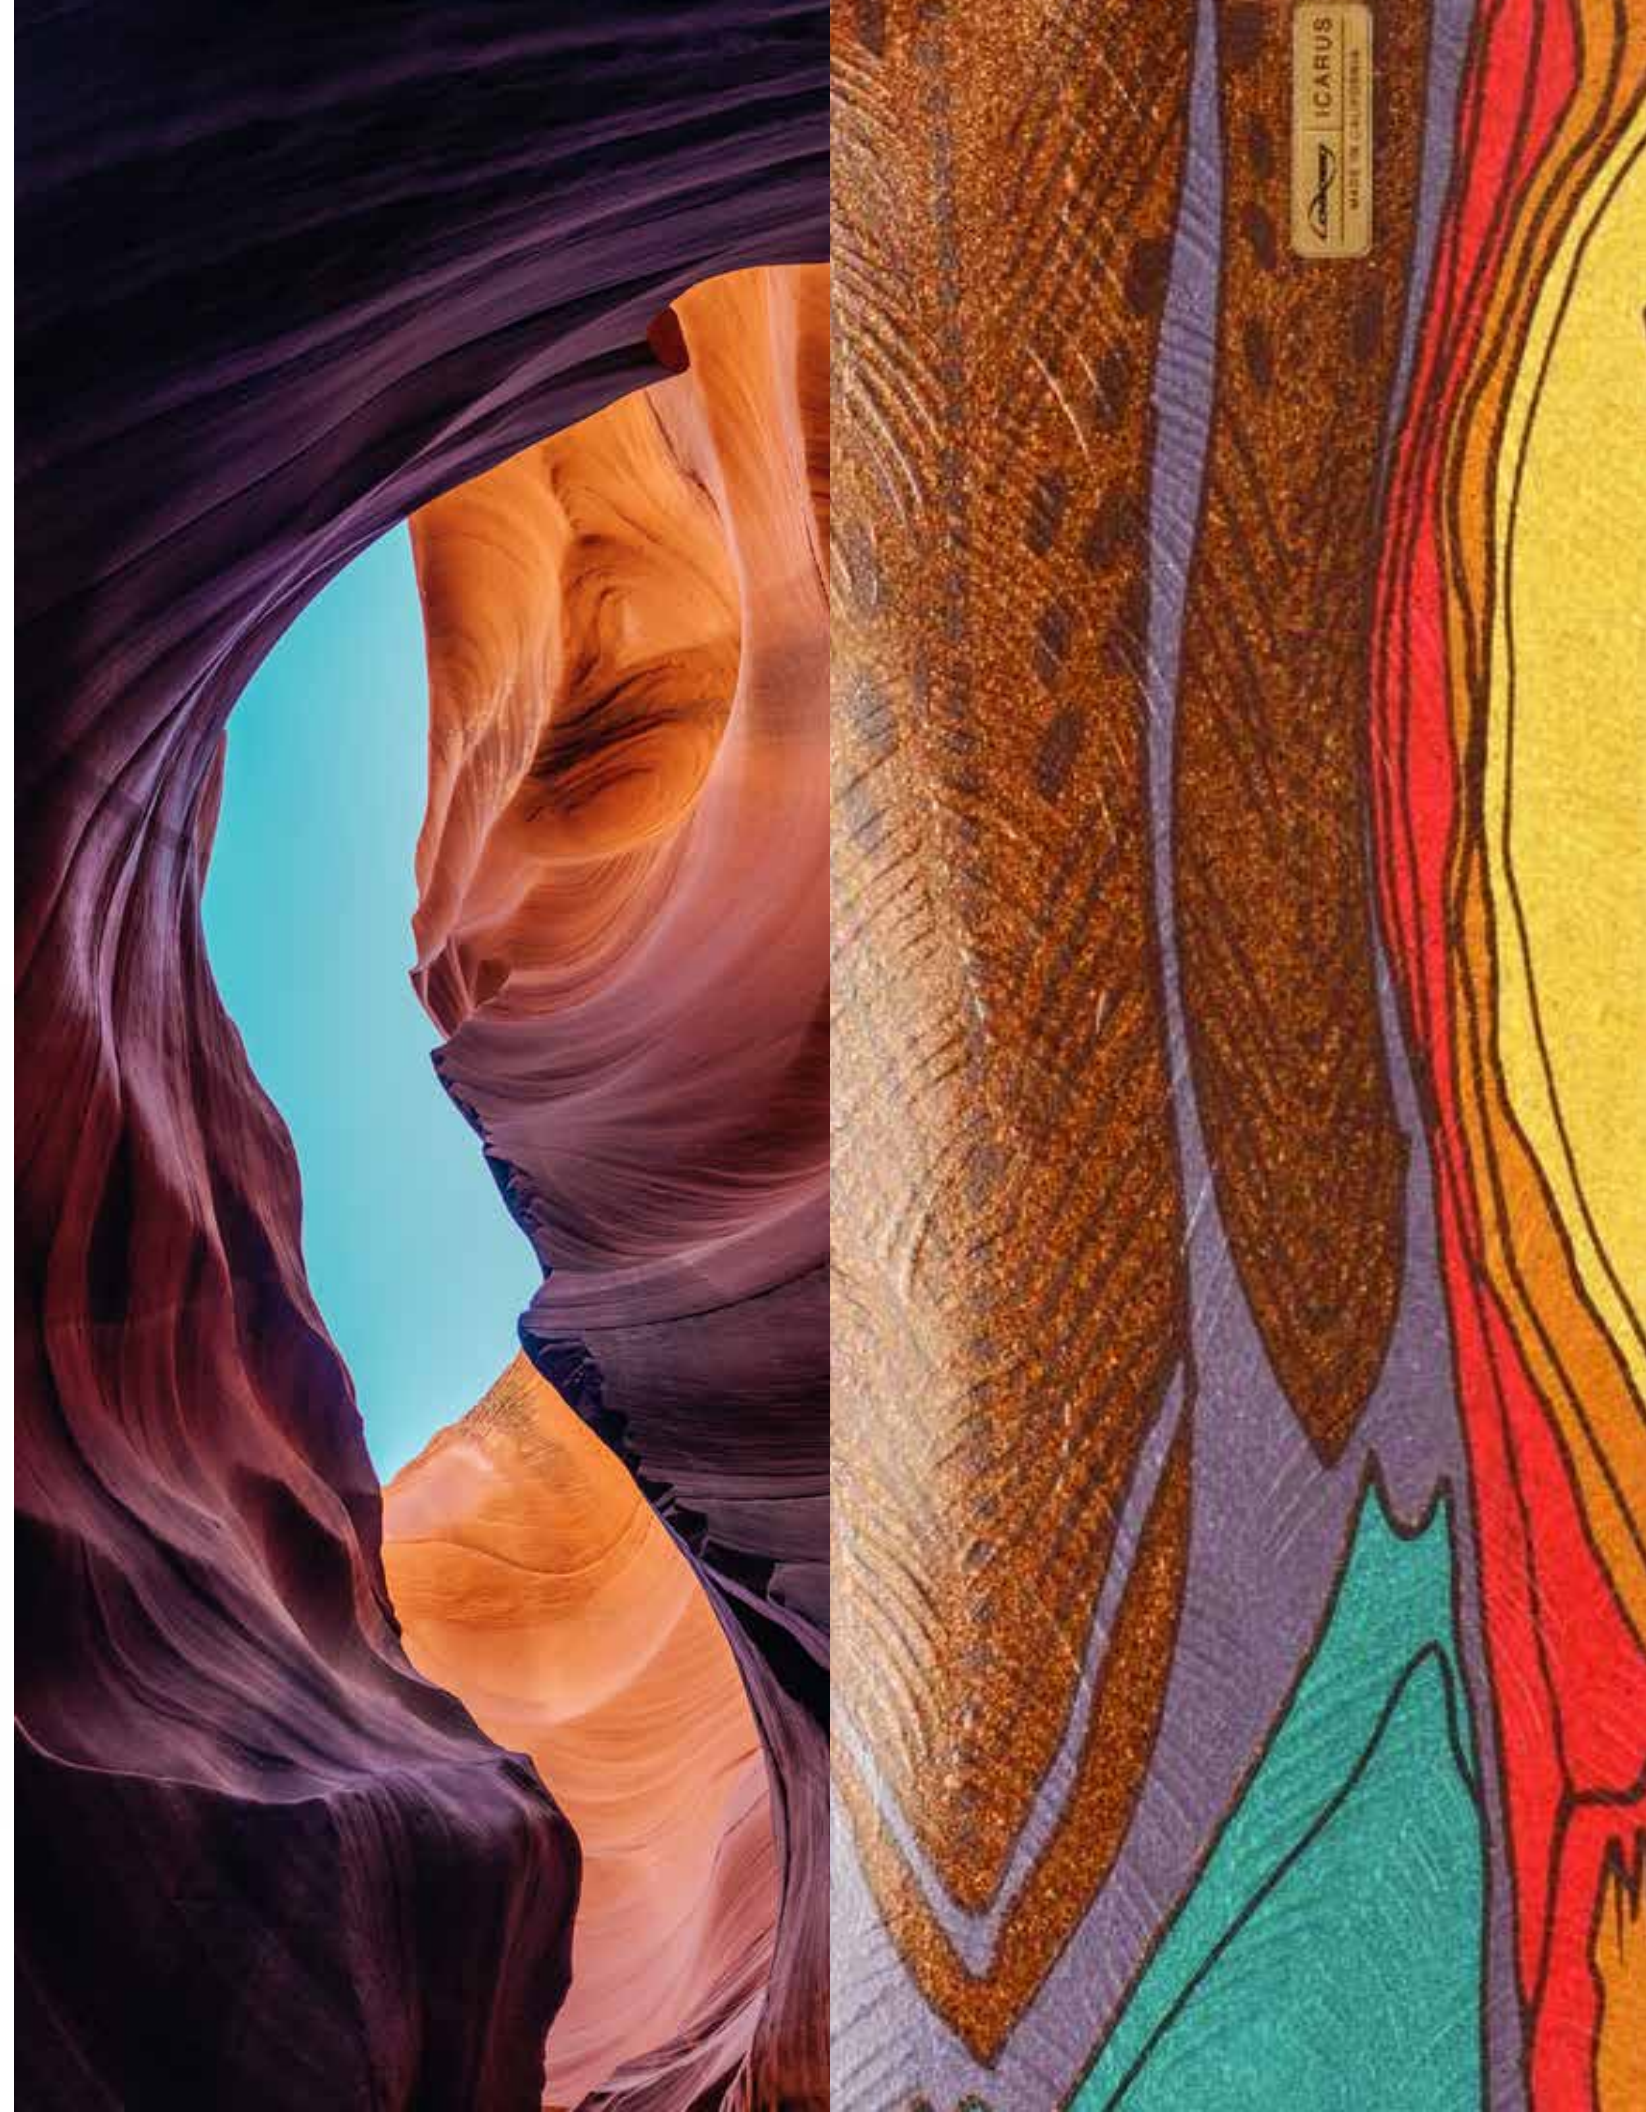

Combining functional and ergonomic wheel flares, vibration-damping cork, a balanced flex pattern, and novel manufacturing methods, the Icarus is a milestone in our exploration of the soulful carving experience.

FLEX 2: 75-200+ LBS / 35-90+ KG

SHORT AND STUBBY IS BEAUTIFUL, TOO.

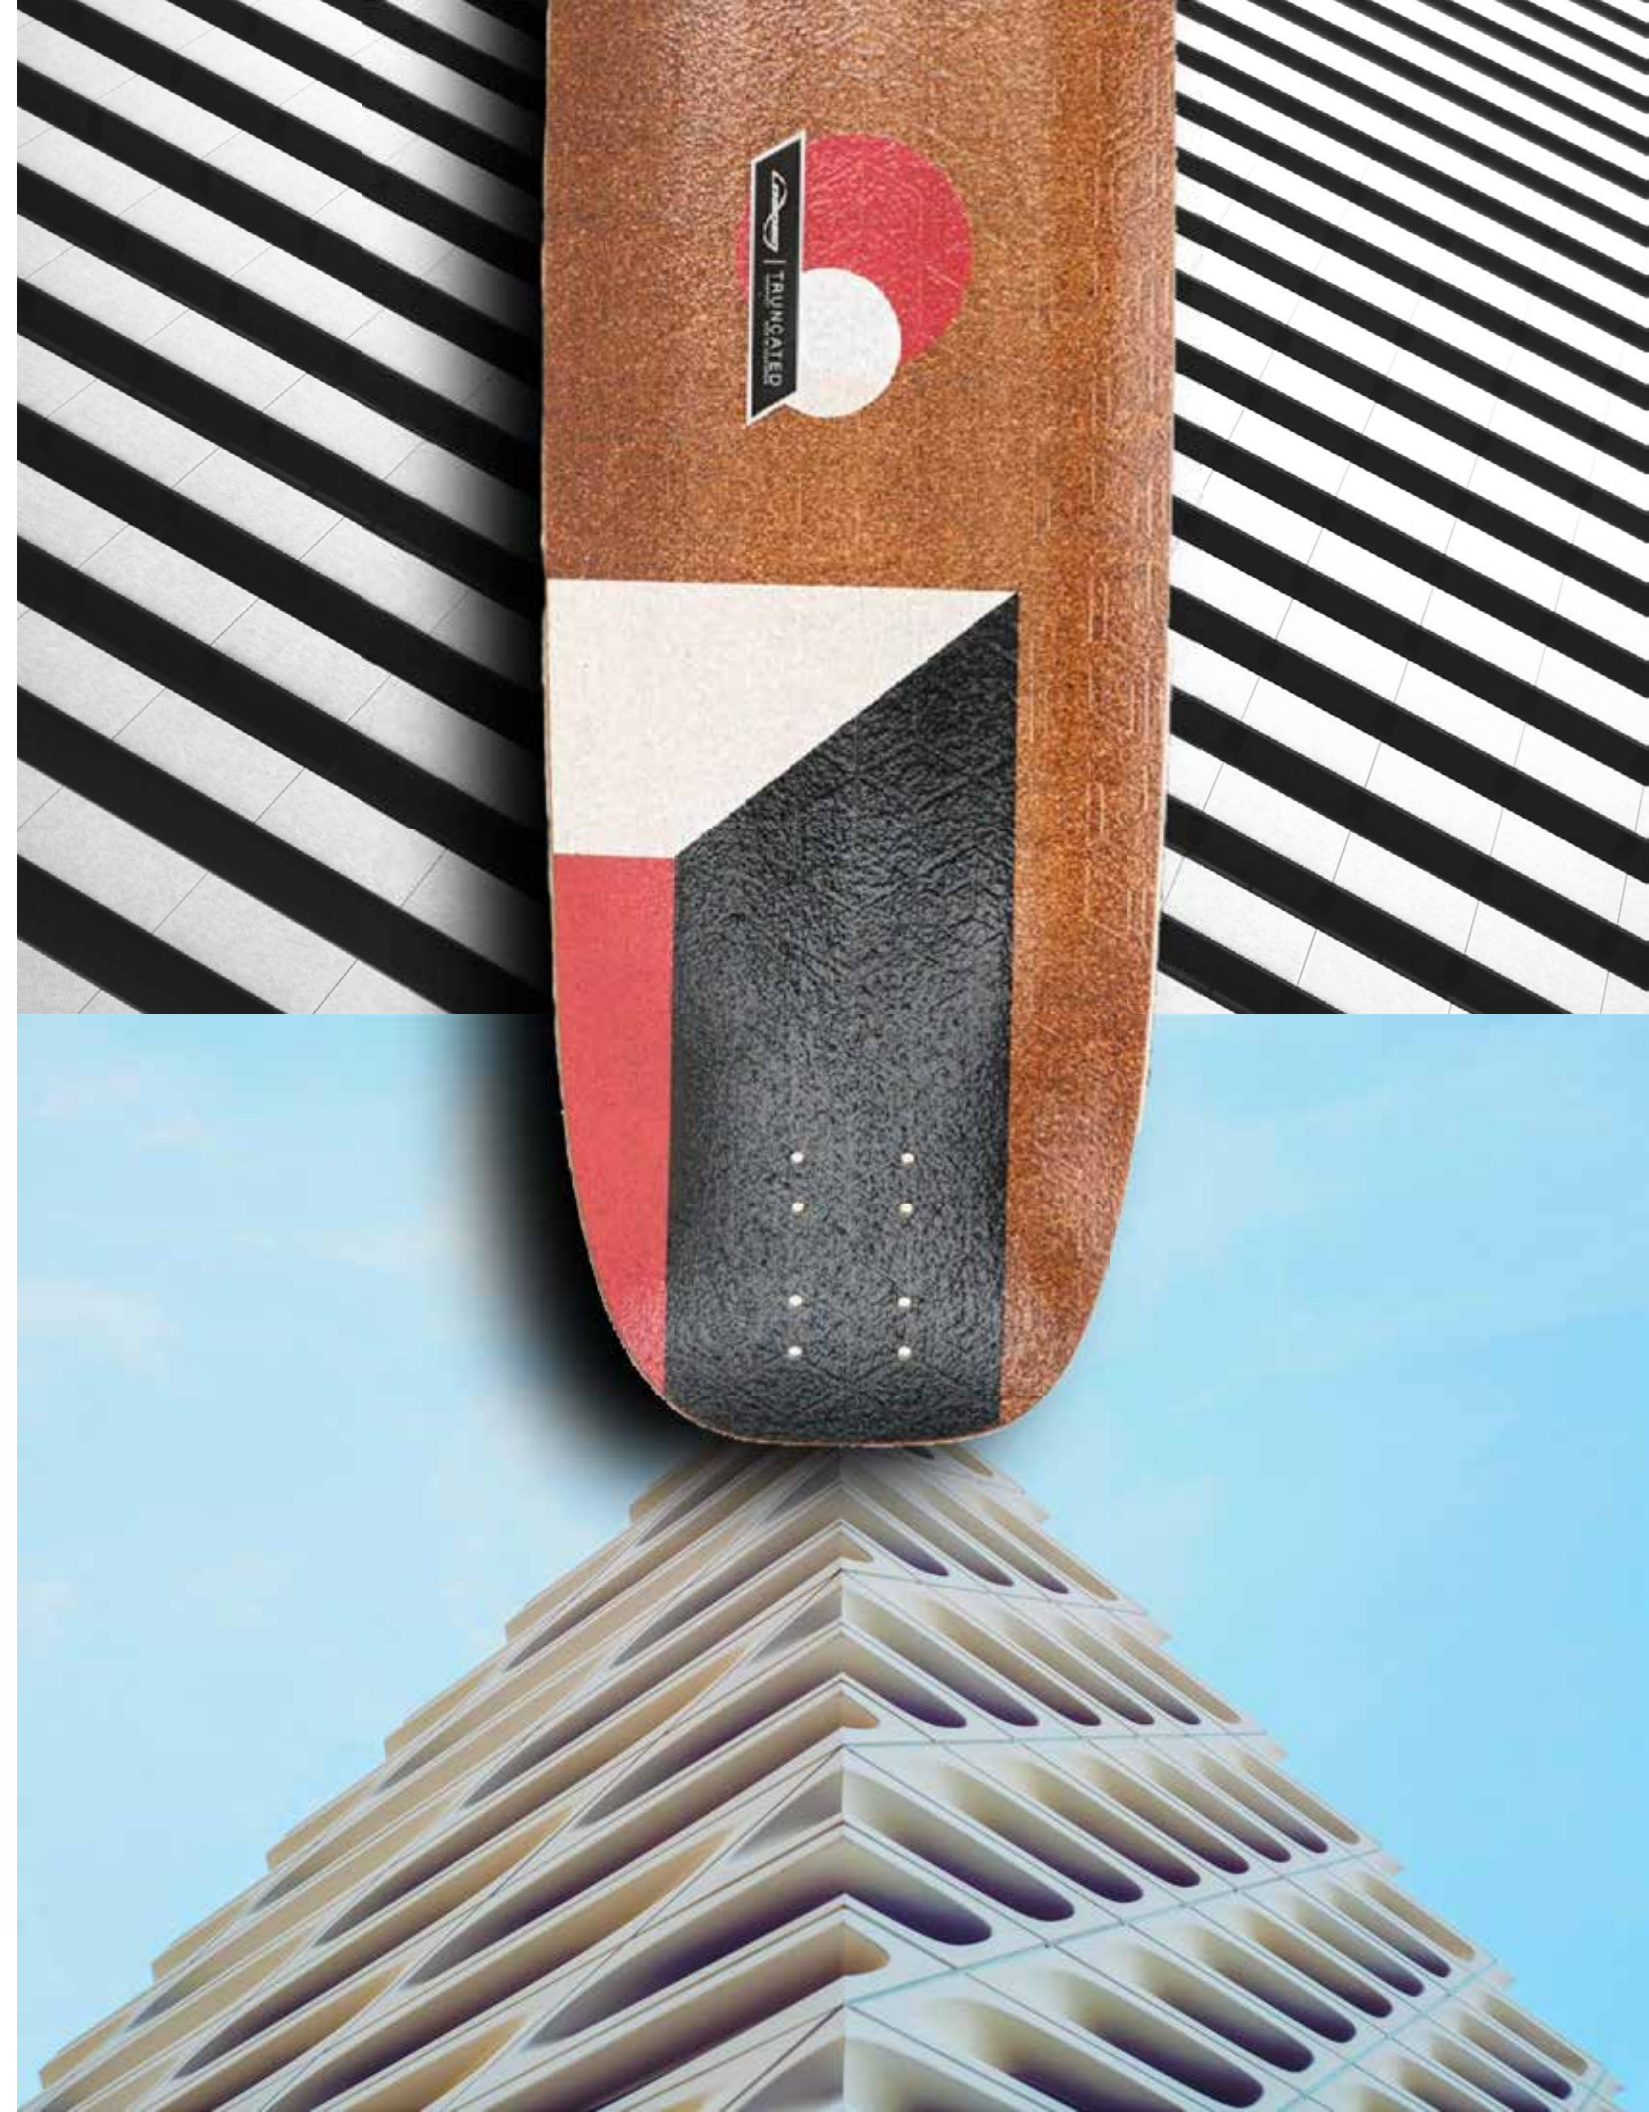

THE TRUNCATED TESSERACT

The Truncated Tesseract integrates rocker, wheel well flares, W concave, and multiple wheelbase options into a lightweight package designed for big mountain roads, high speeds, and snappy slides. It eschews superfluous appendages in favor of a more traditional and race-inspired shape while retaining all the performance-driven ergonomics and construction of its precursor.

FIND YOUR CENTER.

THE TAN TIEN

The Tan Tien blends carve-oriented longboarding with advanced trick riding. A flexible deck, drop-through truck mounts, and usable kicks allow the Tan Tien to pack a lot into a relatively small package. The complex contours create a super responsive board that allows for increased confidence when leaning into turns, popping tricks, and powering through slides. Lines are fluid. Directions are malleable. Featuring an updated graphic and new engineered wood bottom veneer for 2017.

DROP-THROUGH CARVING BLISS.

THE DERVISH SAMA

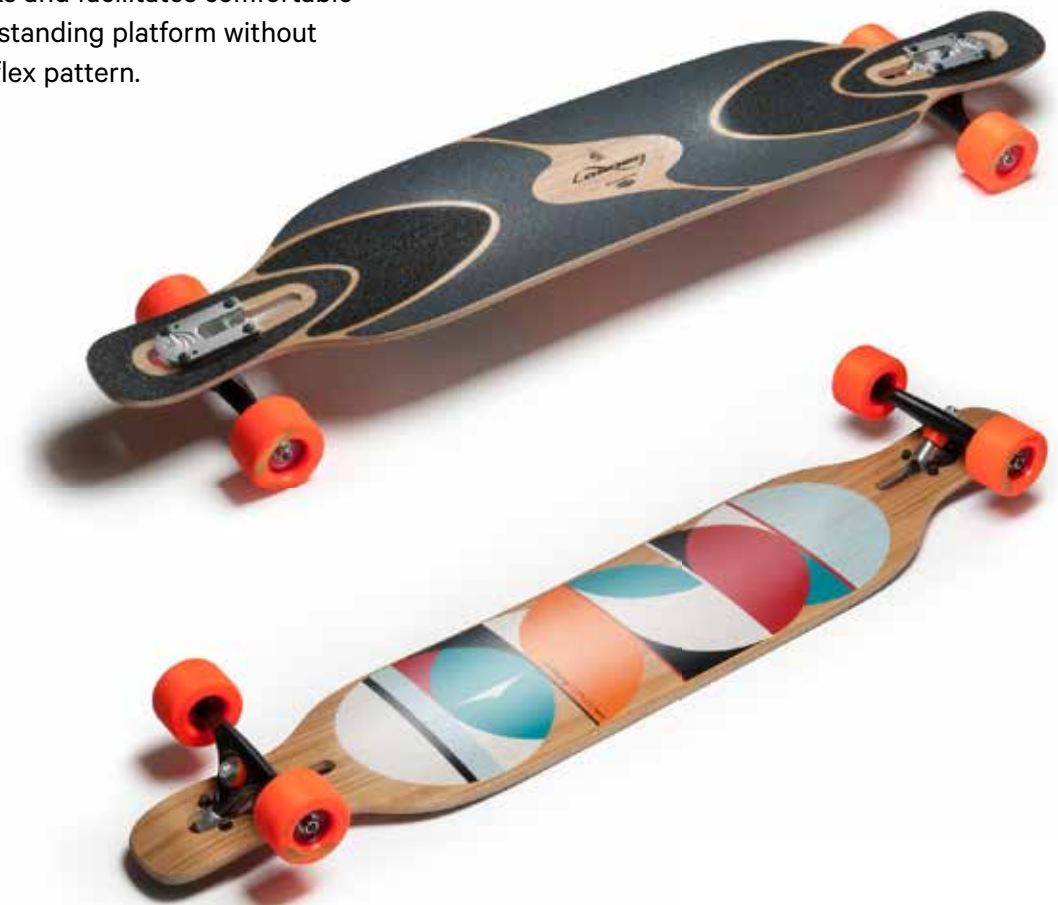

The Dervish Sama balances comfort, edge control, and responsiveness. Combined with more pronounced concave, the extra width enhances turn initiation and slide control. We added subtle nose and tail kicks to increase pop and lock your feet in for freestyle tricks. The neck and drop-through cutout were also updated for increased durability under hard riding conditions. A six-piece griptape pattern provides enhanced control at the kicks and facilitates comfortable footwork maneuvers on the standing platform without interfering with the board's flex pattern.

EMBRACE THE FOURTH DIMENSION.

THE CANTELLATED TESSERACT

The Cantellated Tesseract integrates rocker, wheel well flares, W concave, and multiple wheelbase options into a lightweight package designed for big mountain roads, high speeds, snappy slides, lofty ollies, and techy manual combos. It sports a single tail kick to meet your ollie-popping, tick-tacking, and manual-balancing needs. The Cantellated Tesseract's tail features a wider and fuller shape that promotes more frequent and emphatic use than its double-kick cousin.

A LITTLE EXTRA GIRTH NEVER HURTS.

THE FATTAIL

The Fattail was designed for pumping, carving, pedestrian slalom, freestyle and any situation where energetic lines are on the menu. Subtle concave locks your feet in against g-forces, while the topmounted and cambered platform provides lively performance in and out of each carve. The deck's shape offers ample leverage under both feet for aggressive maneuvering while maintaining a subtle taper near the trucks to provide awareness of foot position while powering through turns. It features a hefty kicktail for functionality in both freestyle tricks and surf-style shredding. Fattail is also equipped with a slight nose kick for manuals and shuivits.

FLEX 3: 75-175+ LBS / 35-80 KG

NO LIFT TICKET REQUIRED.

THE VANGUARD

The one that started it all. Symmetrical shape and stance encourage a balanced center of gravity and increase the ability to weight the deck through turns for better control and energy generation. The sidecuts allow for decreased torsional stiffness between the feet to allow for greater nuances in the turning radius.

EVERYTHING IN MODERATION, INCLUDING MODERATION.

THE OVERLAND

The Overland is designed for the all-around rider seeking a happy medium between a shorter technical double kick and a downhill freeriding machine. Mild radial concave and subtle wheel well flares ensure a comfortable stance, while a beefy kicktail and steeper nose provide crisp pop and ample leverage for ollies, slides, manuals and shuvits. The directional shape with tapered waist facilitates quick back-foot transitions from rail to rail and accentuates the rear wheel well flares, while a moderately stiff flex allows for responsive turning. Textured urethane on the bottom provides vibration damping, durable protection, and ultra-smooth rail slides. Two wheelbase options accommodate reverse-kingpin and standard trucks.

YOUR OWN MOBILE DANCE FLOOR.

THE BHANGRA

The Bhangra offers plenty of foot space to get your dancing groove on yet is compact and lightweight enough to facilitate steezy slides and advanced flatland tricks. Upturned nose and tail kicks, purposeful griptape patterns, rocker, mellow concave, and damp flex (created in part by the use of epoxy bio-resin & cork) result in comfortable and functional ergonomics that inspire confidence on both the dance floor and the hills.

PAIRS WELL WITH MARSHMALLOWS AND RAINBOW BRITTLE.

THE CHUBBY UNICORN

The Chubby Unicorn puts all our eggs in one basket. Rocker, W concave, functional wheel well flares, and nose and tail kicks create an ergonomic platform for downhill decadence and freestyle fun. CNC routed grab rails and recessed angled truck mounts shave weight, lower your center of gravity, and keep your steering geometry true. Orangatang urethane sidewalls, a bass wood core, composite construction, and a UHMW base provide abrasion resistance, durability, moisture resistance, and vibration dampening.

BLUR THE BOUNDARIES.

THE KANTHAKA

Like its namesake from Buddhist legend, the Kanthaka is an agile, muscular, and loyal steed for any rider seeking a swift and exciting journey to double-kick freeride enlightenment. Blurring the lines between street skating and freeriding, the Kanthaka builds off contemporary skate design and brings rocker, functional and ergonomic wheel wells, and composite construction to create something innovative, versatile and unique. Available in two widths.

GLOVES

FREERIDE V.7

Non-articulated thumbs for less chance of drag, synthetic suede palms and ergonomic finger shapes for close and comfortable fit. Removable EVA foam wrist cushion. Breathable mesh top. Lined with Coolmax® wicking fabric. Reflective lining. Velcro palms, fingertips, and thumb. Chamfered UHMW palm and thumb pucks. High density finger pucks.

ADVANCED FREERIDE

Slim, minimalist design strikes an optimal balance of dexterity, protection, and durability. Supple yet durable goat leather construction. Dual-layer leather reinforcement. Non-articulated thumbs for less chance of drag. Segmented leather and foam knuckle guards for protection and dexterity. Large, segmented Velcro palms maximize puck adhesion and flexibility. Chamfered UHMW palm pucks. Lined with Coolmax® wicking fabric. Ventilation windows for extra airflow. Reflective edging for low-light riding conditions.

RACE

High quality goatskin leather. Carbon knuckle and finger protectors. Leather reinforcement. Non-articulated thumbs for less chance of drag. Breathable mesh top. Lined with Coolmax® wicking fabric. Reflective sections. Velcro palms, fingertips and thumbs. Ergonomic finger shapes. Chamfered UHMW palm and thumb pucks. High density finger pucks.

HARDWARE

FLANGE HEAD HARDWARE

These extremely strong steel flange head bolts feature an integrated washer to reduce the height of the bolt heads while still distributing pressure.

Available sizes: 1", 1.25", 1.5". Hex key included.

FLAT HEAD HARDWARE

These extremely strong steel flat head bolts are ideal for freestyle and street oriented setups where unobstructed foot mobility over the entire deck is required.

Available sizes: 1" and 1.25". Hex key included.

JEHU V2 BEARINGS (JEHUNIONS)

Developed to withstand the rigors of performance longboarding. The new Loaded Jehunion Bearings (version 2 of our original Juhu bearings) feature extended inner raceways to eliminate the need for separate spacers and speed rings. Crank them all the way down and keep your setup tight.

Rubberized steel shields for durability and ease of maintenance. Interior step ring to maintain constant lubrication. Pink.

APPAREL

LOADED MT. WHITNEY TEE

Organic cotton and printed with water based inks.

LOADED SHAPE SHIFTER TEE

Organic cotton and reverse printed with water based inks to give the graphic a worn in look. Every shirt will look different.

LOADED LOGO TEE

Organic cotton and printed with water based inks.

APPAREL

LOADED WHITE TUNA TEE

The Loaded Fish Tee is a tee shirt with a fish on it. It's a special fish, frequently eaten raw but often canned.

LOADED WHITE PIXEL MT. TEE

Pointillist get to the point.

MOVING FORWARD, WHILE STANDING SIDeways.

THE ALGERNON

High-end performance snowboard for the discerning rider. Built to go fast with control in a wide variety of conditions. Loaded started by applying snowboard construction to skateboards. Coming full circle, the Algernon applies what we learned from skate back to snow. Developed over the course of a decade, the Algernon is built from the ground up in our Southern California factory.

Custom Bamboo Core and Top Sheet: Tip to tail and edge to edge.
Hand-inlaid Cork Footbeds: Additional vibration damping.
Directional-Twin Shape: Twin between the wide points with a slightly longer nose for powder.
Mustache Camber: Solid edge hold, powerful snap, intuitive feel, less catchy than others.
Extra Rear Binding Inserts: Set your stance back on the super deep days.
Comes hand sharpened and detuned with One Ball Jay bio-wax.
