LOADED OVERLAND

Length: 37"
Width: 9.5"
Wheelbase: 20.75" and 22"
Weight: 1.6kg

Bridging the gap between the Kanthaka and the Tesseract, the Overland is Loaded's brilliant answer to the all-round shredding board. It functions superbly as a bowl/techslide board with TKP trucks and hard wheels but equally it can transform into a freeride machine with a simple change over to some RKP trucks and softer wheels!

The idea of this board is that it can tackle any terrain. Whether I was nipping into town to the post office, going out for a session at the local skatepark or tearing down one of the local hills, this board was totally ready for the job and gave me such a thrill. The board only weighs in at 1.6kg which, combined with the super functional kick tails, makes everything from a drain cover to a stair set into an obstacle that has to be shredded! The graphic is super stylish and the urethane base is super durable and ribbed for your pleasure to keep things interesting.
